

Deploying a Linux EC2 Instance and Connecting via SSH

The goal is to launch an EC2 (Elastic Compute Cloud) Linux instance on Amazon Web Services (AWS) and establish a secure connection to it using the command-line interface (CLI) and SSH (Secure Shell) protocol.

Step 1:

Sign in to the AWS Management Console and navigate to the EC2 service

Step 2:

From the EC2 Dashboard go and select Launch instance.

Step 3:

Choose an Amazon Machine Image (AMI) for the Linux server. You can choose from various Linux distributions available.

Step 4:

Select the instance type that suits your requirements. Consider the CPU, memory, storage, and network capacity you need.

EC2 > Instances > Launch an instance

Architecture	AMI ID	Publish Date	Username	
64-bit (x86)	ami-0ec10929233384c7f	2026-03-14	ubuntu	Verified provider

▼ Instance type [Info](#) | [Get advice](#)

Instance type

t3.micro Free tier eligible

Family: t3 2 vCPU 1 GiB Memory Current generation: true On-Demand Linux base pricing: 0.0104 USD per Hour
On-Demand Windows base pricing: 0.0196 USD per Hour On-Demand Ubuntu Pro base pricing: 0.0139 USD per Hour
On-Demand SUSE base pricing: 0.0104 USD per Hour On-Demand RHEL base pricing: 0.0392 USD per Hour

Additional costs apply for AMIs with pre-installed software

☐ All generations [Compare instance types](#)

Step 5: In Key pair select Create new key pair. This key pair will be used to securely connect to the instance via SSH.(make sure to download and securely store the private key file (.pem) in a safe location.)

Architecture: 64-bit (x86) AMI ID: ami-0ec10929233384c7f Publish Date: 2026-03-14 Username: ubuntu Verified provider

Network: vpc-00fcd74dcc2a23c08

Create key pair

Key pair name

Key pairs allow you to connect to your instance securely.

key12

The name can include up to 255 ASCII characters. It can't include leading or trailing spaces.

Key pair type

☒ RSA
RSA encrypted private and public key pair

☐ ED25519
ED25519 encrypted private and public key pair

Private key file format

☒ .pem
For use with OpenSSH

☐ .ppk
For use with PuTTY

⚠ When prompted, store the private key in a secure and accessible location on your computer. You will need it later to connect to your instance. [Learn more](#)

Cancel Create key pair

Name	Date modified	Type	Size
▼ Today			
key1.pem	31/03/2026 21:02	PEM File	2 KB

Step 6:

Configure Network setting including subnet, security group, etc. If you're not sure, you can use the default settings.(Allow SSH (port 22) access. By default, incoming SSH traffic is blocked for security reasons.)

Enable

Firewall (security groups) [Info](#)

A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.

☒ Create security group

☐ Select existing security group

We'll create a new security group called 'launch-wizard-2' with the following rules:

☒ Allow SSH traffic from

Helps you connect to your instance

Anywhere
0.0.0.0/0

☒ Allow HTTPS traffic from the internet

To set up an endpoint, for example when creating a web server

☒ Allow HTTP traffic from the internet

To set up an endpoint, for example when creating a web server

⚠ Rules with source of 0.0.0.0/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

×

If everything looks good, click on "Launch" to start the instance.
